

A Visual Atlas of the Semantic–Bridge Library

iso $\cong$ dual $\dashv$ equiv $\simeq$ — patterns, drawn

Figure 1: Fusion S T: one object both worlds factor onto.

Figure 2: SchemeHom: the square commutes (soundness, free).

Figure 3: Core = reflector: unique factorization through toCore.

Figure 4: Idempotent reflector: $\text{core}(\text{core } S) \simeq \text{core } S$.

Figure 5: CaseSplitScheme: split $\rightarrow$ per-case decidable fragment.

Figure 6: Collapse: $u \sim v \iff \text{toQuot } u = \text{toQuot } v$.

Figure 7: Transport: a verified checker/normalizer moves world to world.

Figure 8: SemEquiv: refl / symm / trans (an equivalence).

Figure 9: Real systems: expression $\simeq$ execution trace (both onto same functions).

Figure 10: Duality: objects co-, environments contra-variant.

Figure 11: Faithful $\neq$ onto: `unitToBool` misses a whole class.

Figure 12: `imax`: piecewise (0 or max) $\Rightarrow$ zero-pattern case split.
